

- Acute lymphoblastic leukemia 264
– – – age stratification 264
– – – molecular diversity 264
– myeloid leukemia 292
– promyelocytic leukemia 307
Adherence 348, 363
Adolescence 340
Adolescent(s) 292, 307, 331, 326, 375
– and young adult(s) 279, 298, 313, 348,
363, 383, 414
Aplastic anemia 331
Asparaginase 264

Biomarker 274
Bone marrow failure 331

Cardioprotection 391
Cardiotoxicity 391
Care transition 340
Childhood cancer 375
– – survivors 391
Children 307
Chronic health conditions 383
– myeloid leukemia 298
Compliance 348

Embryo freezing 400

Fertility preservation 400

Gonadotoxicity 400

Hematological malignancy 400, 414
Hematopoietic cell transplant 331
Hodgkin's lymphoma 274

Immunosuppressive therapy 331

Late effects 274

Menorrhagia 326

Non-Hodgkin's lymphoma 279
Nursing 363

Oocyte freezing 400
Ovarian failure 400
– transplantation 400

Pediatrics-inspired treatment 264
Peers 375

Quality of life 363

Romantic relationships 375

Secondary malignancies 383
Sickle cell anemia 340
Stem cell transplantation 313
Survivorship 383
Symptoms 363

Thalassemia major 340
Thrombophilia 326
Treatment 274

Venous thromboembolism 326
Von Willebrand disease 326

Young adults 292, 340, 375
