

## Index rerum

---

- Acid hydrolases 419  
Aging in vitro 9, 28, 79, 89, 371  
Arcus senilis 206  
Arteriosclerosis 428  
Aurothioglucose 135  
Autoaggressive disease 206  
Autoradiography 9
- Biological age 428  
Bone, human 363
- Cartilage, articular 363  
Cell surface 371  
Cellular aging 28, 56, 79, 89, 371  
Cerebral activities 141  
Chick 371  
Chondrodystrophoid 124  
Chromatin 111  
Collagen 124, 363, 449  
Contact inhibition 56  
CRM 212, 438  
Cross-links 363  
Cytokinesis 89
- Deficiency cells 185  
Denervation 280  
Diet, fat-enriched 135  
Differentiation hypothesis 89  
Diploid cells 9, 28, 56, 79, 89  
Disc prolapse 124  
DNA repair 28  
– synthesis 89  
Dogs 124  
Drosophila, bibliography 380–410  
Drug treatment 220
- E. coli polymerase 111  
Editorial I, 205  
Electrical properties 244  
Energy metabolism 244, 301
- Enzyme molecules, altered 212, 438  
Epithelial coros 185  
Error catastrophe 212, 438  
– hypothesis 89
- Fibroblasts 9, 28, 56, 79, 89, 371  
Flight muscle 317, 334  
Forbidden clone 206
- Glycoprotein 371  
Granulocytes 438
- HCG 185  
Housefly 317, 334  
Human cells 9, 28, 79, 89, 438  
Hydrocortisone 79
- Initiation sites 111  
Insect muscle 317, 334  
Institutional dependence 227  
Intercellular matrix 461  
Interstitial cells 185  
Intervertebral disc 124  
Ionic asymmetry 244
- Joint disease 135
- Lactoperoxidase 371  
Learning 157  
Life span, limited 9, 89  
Lung 419  
Lysosomes 419
- Memory 157  
Mice 56, 111, 135, 419  
Motor unit 280  
Muscle 244–361  
– regeneration 280  
Myofibrils 301
- Neuromuscular apparatus 244

- Non-collagen protein 124
- Obesity 135
- Orgel hypothesis 206, 211, 438
- Osteoarthritis 135
- Pinocytosis 56
- Pleiotropin 56
- Post-translational modifications 438
- Private homes 227
- Progeria cells 43
- Programmed aging 89
- Protein synthesis, accuracy 438
- Psychiatric patients 220, 227
- Psychometric tests 141, 157
- Rabbit aorta 461
- Rat ovary 185
- trail tendon 449
- Reinnervation 280
- Retention 157
- Ribosomes 79
- Risk factors 428
- RNA polymerase 111
- synthesis 89
- Skeletal muscle 301
- Somatic cell hybridization 93
- Spondylosis 135
- Steroidogenesis 185
- Template activity 111
- Thymidine metabolism 9
- Tissue culture 3–108, 371, 461
- Transcription
- WI-38 cells 9
