

Erratum

In the paper by *Nestoros et al.*, *Int. Pharmacopsychiat.* 12: 215–246 (1977), 'Transmethylation Hypothesis of Schizophrenia: Methionine and Nicotinic Acid', an error occurred. On page 218 the first paragraph from the top should read: 'Interest in the transmethylation hypothesis was further stimulated by the work of *Pollin et al.* (1961), who were the first to report that methionine, a methyl donor substance, administered in combination with a monoamine oxidase inhibitor (MAOI), exacerbates clinical symptoms in a significant percentage of schizophrenic patients. Whether the acute exacerbation was due to the increase in the rate of transmethylation, or to a methionine-induced toxic delirium, has remained an open question.'
