

In the article entitled “Predicting Successful Hematopoietic Stem Cell Collection in Healthy Allogeneic Donors” [Transfus Med Hemother. 2023;1–7, DOI:10.1159/000531236] by Kayser et al., the authors have found an error in Table 2 of their article. In the row “Median platelets” under the column “% or range”, the number should be “80–424” instead of “80–3,424”.

The corrected Table 2 is shown here.

Table 2. Baseline characteristics of 637 leukaphereses from healthy donors

	<i>n</i> or value	% or range
Female sex	155	26%
Median age, years	29	18–69
Peripheral blood values		
Median WBC, $\times 10^9/L$	43.9	9.5–92.7
Median platelets, $\times 10^9/L$	203	80–424
Median hemoglobin, g/dL	14.6	10.8–17.8

WBC, white blood cell count. Results may not add up to 100 due to rounding.
